Government of India

### Message

It gives me immense pleasure to know that the Ministry of Housing and Urban Affairs in collaboration with the Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ) GmbH is bringing out this “Source Book” on ‘Arrangements for Public Private Partnership for Urban Bus Operations in Indian cities’. Such partnerships will enable public authorities to enhance the capacity and quality of public transport service delivery from existing levels.

The Source Book includes insights from innovative models and experiments by select cities/states for bus operations and can be emulated when arriving at informed choices for adopting strategies best suited to individual cities. I applaud the effort to compile these initiatives in one document, and hope that this publication will serve as a valuable tool for planners, administrators and researchers in the urban transport sector.

## FOREWORD

The business models in public bus transport sector are witnessing transformational changes across the world owing to the advent of new fuel technologies as well as new trends in urban transport ecosystem. In line with the global phenomenon, India has similarly witnessed innovation in the business models of private sector participation, and it is making a mark in the sector. These transformations will change the way bus services are planned, procured, operated, and monitored.

2. Ministry of Housing and Urban Affairs (MoHUA), Government of India has undertaken numerous initiatives to create a conducive environment for such transformative changes in the public bus transport sector. In continuation to the efforts of this Ministry, I have great pleasure in presenting this '**Source Book on PPP Bus Contracts (India)**'.

3. Sourcebook has been prepared as part of the Indo-German bilateral cooperation, Green Urban Mobility Partnership (GUMP) between Ministry of Housing and Urban Affairs (MOHUA) and German Federal Ministry for Economic Cooperation and Development (BMZ), under the project 'Integrated Sustainable Urban Transport Systems for Smart Cities (SMART-SUT)', which is being implemented by MoHUA in association with Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ) GmbH.

4. It captures **innovative models of Public Private Partnership (PPP)** in bus operations adopted by **ten Indian cities**. It will serve as a ready reckoner and help in guiding cities to draw relevant learnings and facilitate decision-making for structuring their public bus operations. It can fundamentally change the role of traditional city agency involved in bus operations through adoption of PPP which can transform the control over financial flows, roles & responsibilities, sharing of various risks, influence on service obligations, scale of operations, etc.

5. The preparation process of the Source Book involved validations from city officials, and their inputs have made a valuable contribution to the study. I take this opportunity to thank all those who have contributed directly or indirectly to this study. I hope this book will enhance the sector efficiency and encourage private sector participation in bus operations.

## **FOREWORD**

The Ministry of Housing and Urban Affairs (MoHUA), Government of India has undertaken several initiatives to transform the public bus transport sector in India. The focus has always been to build a robust ecosystem for bus operations and leverage the expertise of the private sector. One of the key schemes of MoHUA was launched in 2009 under National Urban Renewal Mission (NURM), which focused on providing financial assistance to cities for fleet augmentation. Besides, MoHUA has undertaken several other initiatives to support the buses such as - development of urban bus specifications for bus procurement, development of modal contract document for Public Private Partnership (PPP) in bus operations, institutionalization of urban transport funds, design & development of training programme for city transport professionals and many more. To complement these initiatives, MoHUA has developed the '**Source Book on PPP Bus Contracts (India)**' with an aim to aid city transport agencies to become self-sustainable in providing safe, reliable and affordable bus services.

Various Indian cities have adopted different PPP models to engage private operators to leverage their expertise in procurement, planning, management, operation and maintenance of bus services. Ten such cities have been studied for the Source Book, and the key aspects of their PPP models are examined in this Source Book. It covers the PPP model adopted by cities for operating city bus services, dedicated services of BRTs, intercity and inter-state services using conventional buses as well as upcoming electric buses. Various PPP models studied includes Net Cost Contract, Gross Cost Contract, Hybrid Gross Cost Contract and Hybrid Net Cost Contract.

The features of contractual arrangements of ten cities are captured in detail in the document. Key features of PPP models studied include:

- Institutional setup, operational detail and rolling stock of the service delivery agency
- Funding sources for fleet and infrastructure
- Revenue sources in bus operations (fare box and other sources)
- Allocation of roles and responsibilities between authority and operator
- Provision for assessment parameters to monitor service quality of bus operations
- Payment mechanism and other terms of payment to operator
- Conditions precedent of both parties for building supporting infrastructure
- Termination clauses to terminate operator's agreement

I am confident that this Source Book will act as ready reckoner for the cities opting for PPP model for their bus operations to enable them to adopt a balanced approach while designing contract agreements. I sincerely thank Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ) GmbH for supporting MoHUA in drafting the Source Book on PPP in Bus Contracts (India). I extend my gratitude to all stakeholders including officials from various cities for providing valuable inputs for this source book.

(Jaideep)

# ABOUT THE SOURCE BOOK

The report has been prepared as part of the Indo-German bilateral cooperation, Green Urban Mobility Partnership (GUMP) under “Integrated Sustainable Urban Transport Systems for Smart Cities (SMART-SUT)” commissioned by the German Federal Ministry for Economic Cooperation and Development (BMZ) and jointly implemented by Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ) GmbH with Ministry of Housing and Urban Affairs (MoHUA), Government of India.

MoHUA has taken several initiatives to support the transformation in city bus operations, and through this source book, it intends to further facilitate the cities in better decision-making related to structuring of their core bus operations. The objective of this book is to capture key features of the contractual arrangements between the public and private agencies involved in city bus operations on PPP.

The book captures procurement models of ten Indian cities/states for operations of conventional and electric buses on PPP. The aim is to develop a holistic understanding of the contractual framework and their impact on efficiency and sustainability of bus operations. It will be helpful in increasing private sector participation in the city bus operations and may be referred by the cities/states in understanding different contractual models to enhance overall efficiency and ensure better asset utilization.

# INTRODUCTION

## OVERVIEW OF THE BUS TRANSPORT LANDSCAPE

### 1. BUS TRANSPORT IN INDIA

#### A BUS TRANSPORT IS ATTRACTIVE TRAVEL OPTION FOR COMMUTERS

Affordable services across all income groups

Fast and scalable transport mode

Promotes last mile connectivity through feeder services

High potential to leverage private sector expertise

Competitive cost of travel over other transport modes

#### B THERE IS A NEED TO ENHANCE BUS SERVICE LEVELS

~45,450<sup>1</sup> buses are held & managed by bus agencies in India and about 16% of buses operate on PPP mode in urban areas.

India has only four buses per 10,000<sup>2</sup> population whereas China has about six buses for 1,000 people.

100 of the largest Indian cities require ~USD15.4 billion to procure new buses & upgrade allied infrastructure<sup>3</sup>

### 2. REFORMS AND INNOVATION ACROSS THE VALUE CHAIN CATALYZES THE BUS OPERATIONS

Institutional strengthening & capacity augmentation

Funding & Financial sustainability

Faster technology adoption

Monitoring & evaluation of bus operations

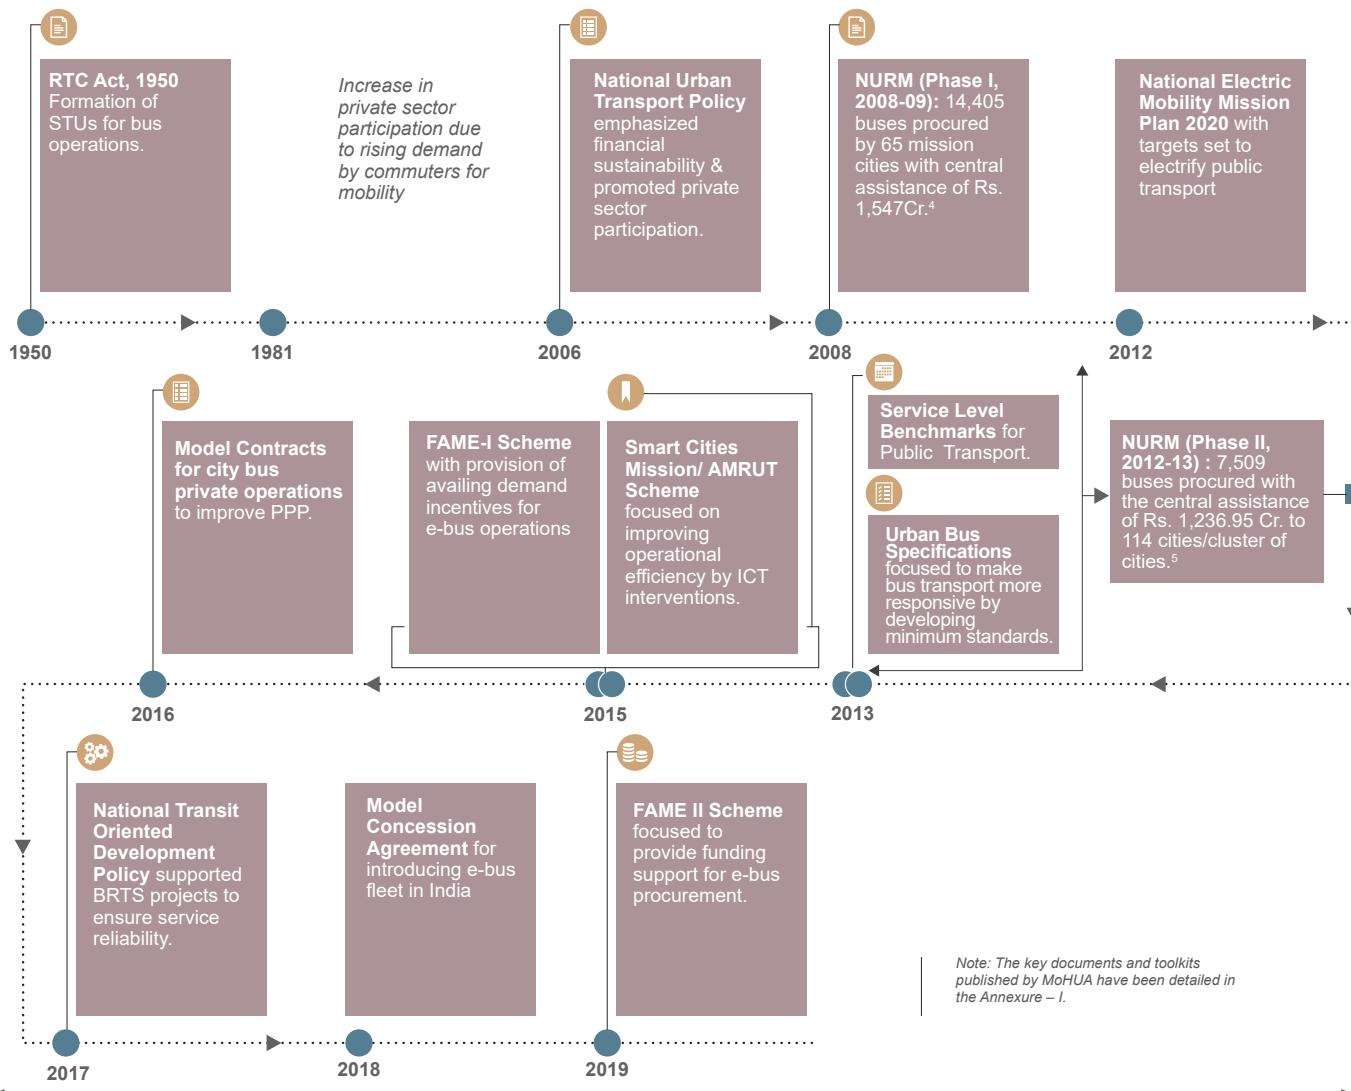

Diversification and bundling of bus service

Integration with other transport modes

Citizen centric services framework

Innovative business models

### 3. GOVERNMENT IMPETUS TOWARDS BUILDING A CONDUCE ENVIRONMENT FOR BUS OPERATIONS

Continuous Capacity Enhancement and Training Measures have been adopted by Government of India for bus transport stakeholders across India

## SNAPSHOT OF PPP MODELS IN INDIA

### 1. UNDERSTANDING THE CONTRACTUAL MODELS FOR PPP BUS OPERATIONS

 Gross Cost Contract (GCC)	 Hybrid Gross Cost Contract (Hybrid GCC)	 Net Cost Contract (NCC)	 Hybrid Net Cost Contract (Hybrid NCC)
<ul style="list-style-type: none"> <li>Authority pays the operator fixed O&amp;M fee based on the operated schedule kilometres</li> <li>Operator quoting lowest fee gets selected</li> </ul>	<ul style="list-style-type: none"> <li>Authority pays the operator fixed O&amp;M fee for kilometres plied and variable fee is paid based on increase in ridership</li> <li>Operator quoting the lowest fee gets selected</li> </ul>	<ul style="list-style-type: none"> <li>Operator retains fare box revenue and pays a system management fee or receives grant from the Authority</li> <li>Operator quoting the highest fee or lowest grant gets selected</li> </ul>	<ul style="list-style-type: none"> <li>Operator retains the fare box revenue and receives fixed O&amp;M fee for operations on non-commercial routes</li> <li>Combination of system management fee payable to the authority or grant payable to the operator</li> <li>Operator quoting highest fee/lowest grant gets selected</li> </ul>

### 2. UNDERSTANDING THE ROLES AND RESPONSIBILITIES ACROSS VARIOUS PPP MODELS

PARAMETER/ PPP MODEL	GCC	NCC	HYBRID GCC	HYBRID NCC
Operational plan (route frequency, timing)				
Bus operations & maintenance				
Revenue Risk			 + Performance based incentives to operator on increasing patronage.	 + Subsidy to operator on un-viable routes
Degree of operator's incentive to increase ridership				
Fixed payment irrespective of ridership	<i>Revenue directly linked to ridership</i>			
Degree of operator's interest in branding & communication				
Operator has low interest in branding & advertisement as no impact on his revenue	<i>Operator has high interest on branding as it directly impacts his revenue.</i>			
Degree of monitoring & penalty regime by Authority				
Requires strong & consistent monitoring with penalty for service below benchmark performance.	<i>Less monitoring, only service quality parameters monitored.</i>			

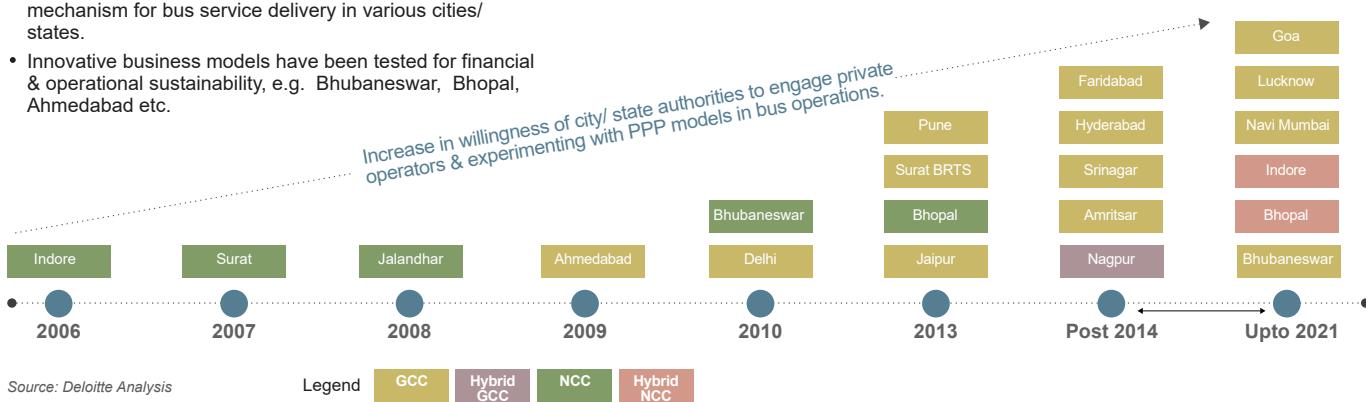

Source: Deloitte Analysis

Legend: Authority (Dark Blue) / Operator (Light Blue)

Low → High

### 3. EVOLUTION OF PPP MODELS IN INDIA

- Cities/ States have been eager to elicit stronger private sector participation for improving the bus transport services.
- Dedicated SPVs have been created for better institutional mechanism for bus service delivery in various cities/states.
- Innovative business models have been tested for financial & operational sustainability, e.g. Bhubaneswar, Bhopal, Ahmedabad etc.

## PPP BUS OPERATIONS IN INDIA

### 1. CHOOSING THE MIX OF CITIES/ STATES AND PPP MODELS IN BUS OPERATIONS FOR THE SOURCE BOOK

#### A KEY ASSESSMENT AREAS OF THE PPP CONTRACTS IN SOURCE BOOK

Capturing the operational indicators of the service delivery agency

Mapping learnings from different city contracts

Evaluating the coverage & extent of performance control & monitoring parameters

Ascertaining key contractual provisions with the private operators

Encapsulating variations in roles & responsibilities under different business models for PPP

Outlining funding mechanism and payment provisions

#### B CITY SELECTION PARAMETERS

- 1 Adequate representation of conventional & electric bus
- 2 Coverage of different types of PPP model
- 3 Operation of services as per contract terms
- 4 Distinctiveness of contract features

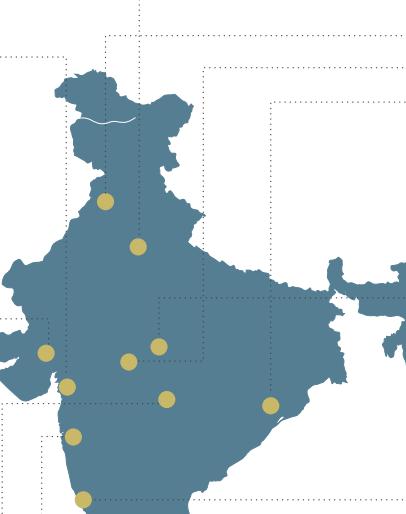

### 2. PREVIEW OF SELECTED CITY/ STATE CONTRACTS

DEPARTMENT OF TRANSPORT [DELHI]
Contract Type: GCC
Contracted number of buses: 1000
Tender Date: 2018

PUNJAB BUS METRO SOCIETY (PBMS), [AMRITSAR BRTS]
Contract Type: GCC
Contracted number of buses: 100
Tender Date: 2016

ATAL INDORE CITY TRANSPORT SERVICES LIMITED (AITCSL) [INDORE]
Contract Type: Hybrid NCC
Contracted number of buses: 40
Tender Date: 2018

SURAT SITILINK LTD. (SSL) [SURAT BRTS]
Contract Type: GCC
Contracted number of buses: 40
Tender Date: 2012

CAPITAL REGION URBAN TRANSPORT (CRUT) [ODISHA]
Contract Type: GCC
Contracted number of buses: 100
Tender Date: 2018

AHMEDABAD JANMARG LIMITED (AJL) [AHMEDABAD BRTS]
Contract Type: GCC
Contracted number of buses: 300
Tender Date: 2019

NAVY MUMBAI MUNICIPAL TRANSPORT (NMMT) [NAVI MUMBAI]
Contract Type: GCC
Contracted number of buses: 100
Tender Date: 2019

KADAMBA TRANSPORT CORPORATION LIMITED (KTCL) [GOA]
Contract Type: GCC (Lease Model)*
Contracted number of buses: 500
Tender Date: 2021

This indicates RfP/ contract pertains to e-buses.

\* Lease Model is a variation of GCC model, where fixed lease rentals are paid by the authority to the Lessor (OEM).

2

## COMPARATIVE ANALYSIS

## CASE SUMMARY

### 1. CITY CHARACTERISTICS AND INSTITUTIONAL SET-UP

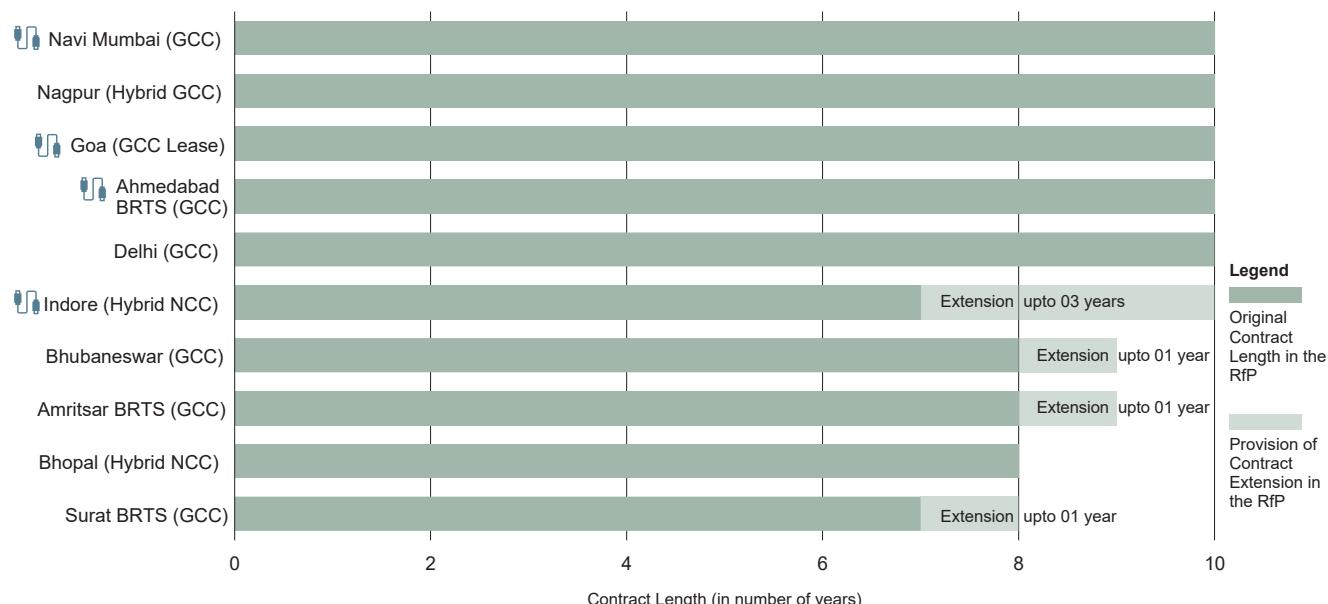

A CITY ASSESSMENT		B INSTITUTIONAL SETUP			C OPERATIONAL DETAILS			
CITY/ STATE	POPULATION (IN MILLION)	BUSES/ MILLION POPULATION	AVG. PAX TRIP LENGTH BY PT (BUSES)	DELIVERY AGENCY#	LEGAL STATUS OF DELIVERY AGENCY	INCORPORATED BY	FLEET SIZE OF AGENCY	Avg. Daily Ridership
Ahmedabad BRTS 	5.50	1.8	9.50 km	AJL	SPV formed under the Companies Act	Ahmedabad Municipal Corporation	281	0.16 million
Amritsar BRTS	1.10	0.8	7.50 km	PBMS	Society under Societies Registration Act	Government of Punjab	93	0.04 million
Bhopal	1.80	1.6	5.81 km	BCLL	SPV formed under the Companies Act	Bhopal Municipal Corporation	304	0.16 million
Bhubaneswar	0.84	2.5	10.30 km	CRUT	SPV formed under the Companies Act	Housing & Urban Development Department, Odisha	225	0.10 million
Delhi	11.00	6.1	10.70 km	Transport Department	Department under GNCTD	Transport Department, GNCTD	6693*	2.98 million

Nagpur	Hybrid GCC					New Fleet					
Navi Mumbai	GCC										
Surat BRTS	GCC										

\* ITS procurement comprises On-board ITS components such as PIS, BDC, GPS device and ETMs etc. along with related software systems.

Legend Authority Operator Lessor

### 4. FUNDING AND PAYMENT MECHANISM

#### KEY HIGHLIGHTS

VGF Model	Fleet Funding	Innovations in PPP	Revenue risk	Performance incentive
Bhopal adopts Hybrid NCC model by paying VGF to operator as fixed annual installments for seven years to purchase and operate new buses.  Indore also works on VGF model and pays operator nominal charges for bus operation.	The cities are adopting joint fleet funding wherein operator is allowed to operate authority owned fleet and purchase additional fleet for bus operations.  In case of CRUT, authority has facilitated operator with soft loan of 75% of the fleet cost and loan is repaid by deducting installments from the monthly bills paid to the operator.	Goa has adopted a lease model wherein authority is obtaining e-buses and charging infrastructure from OEMs on lease by paying the fixed lease rentals. This reduces the significant capital risk of authority.  City authorities have started bearing energy cost and crew cost which has reduced payment paid to the operator.	In Indore and Bhopal, combination of city and intercity routes (i.e. low performing and high performing routes) are outsourced to the same operator, to encourage participation in NCC model and reduce revenue risk of the operator.  Bhubaneswar has established a revenue assurance team to reduce revenue leakages which may arise in GCC model.	Nagpur adopts hybrid GCC model by sharing 10% of additional revenue earned from increased ridership owing to additional fleet availability above baseline standards.  Bhubaneswar, Delhi Nagpur, Ahmedabad, Navi Mumbai, Indore has an incentive provision for meeting KPI's.

City / State	Fleet funding	Payment type and rate paid by	Energy cost paid by	Provision of incentives
Ahmedabad BRTS	100%	Fixed Fee Midi: 54.9 Rs/km	100%	✓
Amritsar BRTS	100%	Fixed Fee Std AC: 21.4 Rs/km	100%	✗
Bhopal	100% (New Fleet)	VGF RP 1.4 million Rs / bus   100 Rs/Bus/month*	100%	✗
Bhubaneswar	100%	Fixed Fee Std NAC: 48Rs/km   Std AC: 60Rs/km	100%	✓
Delhi	100%	Fixed Fee (CYP) Confidential	100%	✓
Goa	100%	Fixed Fee Confidential	100%	✓
Indore	80% 20%	VGF .35 million Rs /month for 40 E-Midi buses	100%	✗
Nagpur	100% (New Fleet)	Fixed Fee & RS Confidential	100%	✓
Navi Mumbai	55% 45%	Fixed Fee Std 69.9 Rs/km   Midi 52.2 Rs/km	100%	✓
Surat BRTS	100%	Fixed Fee Std Ac Euro 3: 53.4 Rs/km   Std AC Euro 4: 54.9 Rs/km	100%	✗

\* Rehabilitation cost of refurbished buses is paid by authority to operator

## 6. KEY LEARNINGS FROM CASE STUDIES

### RFP STRUCTURE

- RfP Design:** RFP must provide fair and equitable accountability distribution between the parties involved in bus operations. It should clearly delineate roles & responsibilities of public and private agencies in a balanced manner specially with respect to contractual provisions on condition precedent, payment terms, events of default, funding, performance assessment parameters, etc.
- Metrics Coverage:** RFPs need to provide clarity on various metrics which could help in differentiating high versus low performance of the operator. This will impact the efficiency of bus operations by the private operator.

### FUNDING

- Fleet Procurement:** The financing constraints of the authority can be resolved by sharing the responsibility with the operator based on their investment and risk appetite. Increasing the financial risk of any individual party by overloading funding responsibility should be avoided. Further, it has been observed that some of the cities are taking funding responsibility jointly for fleet procurement in GCC as well as NCC model. Some unique arrangements are observed where existing fleet of authority is outsourced as well as new fleet is purchased by operator under same contract agreement.
- E-Bus Technology:** Since charging infrastructure and e-buses is an upcoming technology and city authorities have limited precedence & expertise, the responsibility of charging infrastructure and e-bus operations should be transferred to the operator or OEMs initially.
- Asset Transfer:** Transfer or resale of asset with huge investment costs such as fleet/ infrastructure, at the end of tenure or midterm (termination) is an important parameter for sharing risk between parties. However, it is found missing in most RFPs. Depot asset ownership at the end of contract tenure rests with the authority in most cases. Given the rapidly evolving e-bus technology and the likely availability of improved e-bus models at the end of the contract tenure of ~10 years, leaving asset ownership with the operator can potentially reduce the rate quoted by the operator. Moreover, after end of tenure, practice should be to distribute assets (parking space, equipment's, machineries and civil infrastructure) equally or authority should purchase the same at depreciated value as this will help in further reducing per km cost of operator. Adequate focus must also be given on asset transfer in case of contract termination due to default of the operator or authority. Absence of focus on this clause will be perceived as high risk and will drive the cost up and may also discourage lenders.

### REVENUE GENERATION

- Quality-based Incentive:** Sharing revenue with operator in addition to payment of fixed fee in the form of incentive acts as a motivation for operator to increase ridership by improving service quality.
- Innovative Revenue Sources:** Provision for generating revenue from non-fare sources such as, advertisement, monetization of asset, should be adopted by cities which are necessary to ensure financial sustainability of bus operations. For instance, transforming charging infrastructure for e-buses to allow charging of other electric vehicles, commercial development at passenger terminals or stations etc. Sharing of revenue generated from advertisement on buses or passes between parties, also adds to the additional source of income for the operator. There should be a clear provision for exploring innovative source of revenue in the RFP.
- Safeguarding Operator from Revenue Risk:** Provision of empowering operators with decision making w.r.t. regulatory and financial decisions, especially in NCC when revenue risk is borne by operator, should be practiced by cities and should provide a clear provision in the tender document. For instance, empowering operator to impose penalty on ticketless travelers, can safeguard operator from revenue risk; issue passes and concessions for specific categories etc.; periodic fare revision (annually) based on variations in wholesale price index and fuel price.
- Further, all RFPs must have safeguards against perpetuation of inefficiencies, covered by VGF or fare revisions under the cloak of "Public Transport is a loss-making business."

## OPERATIONS COST AND PAYMENT STRUCTURE

- **Fuel and Crew Cost:** Cities that have borne the fuel and crew costs have received lower bids on per km basis and with tax savings as added advantage.
- **Payment to the Operator:** Provision for adequate annual escalation in fees to the operator, should be allowed to cope up with increased prices. The higher annual escalation of per km fee, will reduce the per km cost quoted by bidder. In most cities, the escalation has been found to be linked with CPI and/or WPI, fluctuations in fuel cost which together integrates the cost of manpower and material relevant for bus operations.
- **Honouring Contractual Provisions:** The contractual parameters are required to be followed by both parties to ensure a symbiotic and professional client supplier relationship. The authority should aim to pay the operator in time. A delay in payment may result in deterioration of interest and innovation.
- **Subsidy Provision:** Funding subsidy (CAPEX, OPEX) maybe provided for performance of buses against predefined operational targets (EPKM, CPKM, KMPL etc.), which will also ensure buses are operating and are not sitting idle after procurement.

## ROLES AND RESPONSIBILITIES

- **Roles and responsibilities of parties:** The majority of the tender documents studied clearly specifies the operators' obligations. In addition to the that, authority's responsibilities should also be captured in detail to avoid any future conflict of interest between authority and operator.
- **Upcoming responsibility matrix:** In upcoming lease model, unique kind of responsibility distribution is observed. It engages OEMs as lessors to provide and maintain buses, manage resources (labor as well as civil infrastructure) and authority plan, operate and monitor bus operations. This helps in significantly minimizing the requirement of upfront investment while managing in-house operations.

## PERFORMANCE MONITORING

- **Performance Parameters:** Establish a set of performance metrics in the contract that align directly with the authority's strategic goals which will be used to evaluate operator's performance. Performance assessment parameters should be quantitative measurement and shall be objective to avoid misinterpretation between authority and operator during inspection of operations.
  - The manageable list of parameters should be chosen, that create clear incentives for performance improvements, and which are specific, achievable, and consistent.
  - Performance standards should include metrics for service quality improvement, reasonable targets and bonuses available for exceeding targets.
  - Performance metrics should include minimum thresholds/service standards and penalties for failing to meet desired service standards. e.g. Occupancy Ratio of 70%, Delayed trips (delayed beyond 10 mins) shall be less 2% trips.
- **Reward Mechanisms:** All the cities should include provision of the incentive parameter for the operator to improve bus services. Very few cities have incentive criteria's that are well defined and has no subjectivity in assessing parameters.
- **Penalty Mechanism:**
  - Penalty clause needs to be designed objectively. In most of the cities, penalty criteria are relatively subjective and are open for interpretation of the checking inspector or individual judgement, which may lead to different understanding between the operator and authority and may result in erroneously imposing penalty.
  - Some cities are following the practice of consultation with operator for levy of fines/penalties. Some cities also give a fair chance (by provision of cure period) to operator to rectify repair and deficiencies before imposing penalties. Such consultations with operator should be practiced by all bus agencies.
  - Provision for equitable penalties to be imposed on account of failure of both the parties at fault and not only on operator to maintain the operator's interest in provision of services. The operators should not be penalized for events that are out of their control.
  - Customer feedback is collected in maximum cities but does not form a part of assessment criteria for evaluating operator's performance. This should be practiced by city authorities to provide better customer experience and ensure customer delight.
- **Polite Consultation Norms:** Establish communication norms within the contract that allow for productive conversations between the authority and the operator on a regular interval to discuss the progress and review recent performance and its implications for bonuses and penalties as well as any other issues as they arise, as suggested in Modal Contract document of city bus private operations 2016. A regular meeting to share information would foster the mutual relationship and allow both sides to suggest ways to improve the relationship. Such provisions are missing in most of the contract agreements.

## OTHER CONTRACTUAL CONDITIONS

- **Conditions Precedent:**
  - Absence/ limited clarity of the clauses for conditions precedent can lead to delay in Commercial Operations Date (COD). Thus, adequate provisions should be made by cities for these clauses. The responsibilities of both the parties shall be clearly mentioned.
  - Provision for penalties on account of non-fulfillment of conditions precedent to be levied on both the parties and not only on operator as observed in RFPs.
- **Termination:**
  - Termination clauses in RFP have exhaustive coverage on operators default and very minimal coverage on authorities' default. This clause should cover necessary conditions on event of default by both parties. Relaxed payment obligation and liability of the authority even in case of default may affect and add to the bankability risk for the operator.
  - Contractual parameter on dispute resolution is required so that disagreements can be aired and resolved amicably between authority and operator. A clear methodology outlining how disagreements shall be resolved enable maintaining a good client-supplier relationship is missing in most of the agreements. The person identified for resolving conflicts should not be related to either party.
  - Penalty settlement mechanism incase of termination should be fair in any PPP bus operations. The payment settlement mechanism should be equitable to minimize significant financial losses for operator.
  - Transition period after termination is missing in all the cities and can put authority in difficult situation incase of termination of operators' contract. This will affect services and can even lead to loss of ridership. A transition plan is required to be in place to deal with a situation when the contract's term is completed, or it is terminated prematurely and should be provisioned for while contracting.
- **Contract Flexibility:** While some contract agreements under review have provided flexibility in the benefit of city mobility, some contracts need to contain certain conditions that enable actions to address changes in operating environment such as varying demand. Some examples:
  - Adjusting fleet size assigned to operator to meet travel demand
  - Route modifications or Network expansion (with considerations of operator's earnings) especially in case of NCC model
  - Fare adjustment in case of increased competition in the market affecting contract viability

3

## CITY-WISE ASSESSMENT

### 3.1 AHMEDABAD (GUJARAT)

\*Rate is inclusive of electricity charges

Under 'Chief Minister Urban Bus Scheme' of Gujarat, AJL receives VGF of 12.5 Rs/km from state and 12.5 Rs/km from Ahmedabad Municipal Corporation to run new buses.

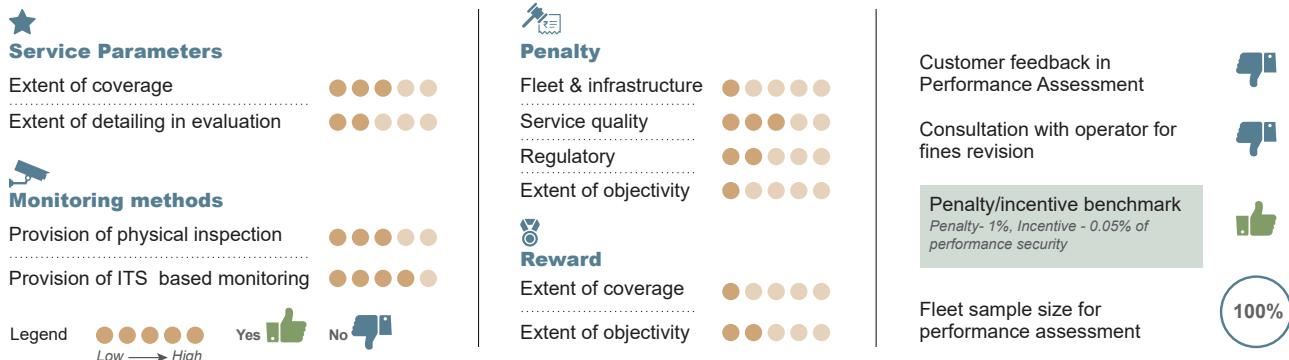

#### 4. ROLES AND RESPONSIBILITIES

As per the contracting terms various roles and responsibilities distribution between authority and operator are captured below.

#### 5. PERFORMANCE CONTROL AND MONITORING

The Operator is expected to meet base minimum performance standard (Baseline Performance) for identified parameters.

#### 6. OTHER CONTRACTING TERMS

##### A CONDITIONS PRECEDENT

	Authority	Operator
Extent of coverage of responsibilities		
Penalties on non-fulfilment		

##### B TERMINATION

	Authority	Operator
Coverage of event of defaults		
Degree of fair payment settlement		

#### 7. DISTINGUISHING FEATURES

##### 1

Considering the limited understanding of new technology, authority has allocated most of the responsibilities related to technology, operation and maintenance to OEMs/ Operator so that risk is allocated to the party best suited to handle it.

##### 2

The Operator is vested with the responsibility to provide charging infrastructure at the Depot, and they are also responsible to provide opportunity charging during operational hours for minimum 75 minutes per bus. AJL has installed solar panels at the depots to reduce external electricity demand and costs for charging of e-bus.

##### 3

In Gujarat, the city bus operations on PPP are supported with a Viability Gap Funding (VGF) under the 'Chief Minister Urban Bus Scheme'. As part of this scheme, VGF is provided to part fund the PPP operations for a period of 7 years. A VGF of 50% or Rs. 12.50 per km is given to the ULBs and remaining 50% or Rs. 12.50 per km must be contributed by the ULBs for new buses.

#### 7. DISTINGUISHING FEATURES

##### 1

An Urban Transport Fund is managed by Punjab Municipal Infrastructure Development Company which collects Cess of 10 paise per liter on sale of diesel and petrol across the state. The receipts of this fund are used to support various urban transport projects across the state, and Amritsar BRTS project is one of the beneficiary to receive the subsidy.

##### 2

Amritsar BRTS has provided several freebies and incentives such as free ride for 3 months, free ride for students, discount for special categories, etc. to encourage modal shift to public transport and it has yielded good results.

##### 3

The authority takes the responsibility related to fuel, and as they are able to procure bulk fuel at a discounted rate, they are able to reduce the overall operations cost. The responsibility related to conducting periodic trainings for crew is transferred to the operator.

##### 4

Authority has retained the right to collect up to 10% of revenue lost from fleet availability being lower than the stipulated assured fleet standard. All fines are specified as "deduction" in terms of payable kilometers for each type of non-performance.

NM – Not mentioned in RFP

#### 7. DISTINGUISHING FEATURES

##### 1

BCLL develops the public transport infrastructure like depots and bus terminus to support the operator and make the NCC model sustainable. BCLL also receives 25% of share from parking fees collected by development authority which is utilized for developing the said infrastructure.

##### 2

BCLL carried out a service plan assessment and revision in routes, which helped them gain ridership. Further, user satisfaction surveys were conducted to understand the expectations and were suitably addressed in route planning and contract formulation. BCLL also gained from fuel efficiency programme and depot modernization.

##### 3

BCLL adopted a different contracting model whereby they contracted refurbished buses to the operator at a nominal monthly premium for two years to ensure complete asset utilization as well as meet its public service obligation; and later the operator replaced the existing fleet with new buses and received VGF per bus.

##### 4

A cure period of two weeks is given to the operator as remedial measure to improve on the defects and undertake repairs identified by authority, before imposing penalty. Further, there is a provision to change routes or introduce new routes and change the frequency or number of buses on some routes in consultation with operator.

#### 7. DISTINGUISHING FEATURES

##### 1

Owing to well defined organization structure, strong leadership, communication and marketing activities CRUT is able to provide high quality bus services to the citizens for which it has received various accolades during the first 2 years of establishment. CRUT is the first agency to introduce gender-based ticketing.

##### 2

Authority supported the operator by providing soft loan (75% of total cost) for bus procurement, which has to be repaid over the contract period; for which equal installments are deducted from monthly bills paid to the operator. Moreover, depot infrastructure is also funded by the authority, but the construction, and maintenance is undertaken by operator as per specifications given by CRUT.

##### 3

Exhaustive performance parameters have been laid down, and there are incentives and penalties linked with them. The fulfilment of performance parameters yields rewards to the operator and penalty is levied for non-fulfilment. CRUT has established dedicated Revenue Assurance team to verify revenue collection in the field.

##### 4

There is a provision in contract which offers flexibility for adding new buses upto 25% of the total fleet size required under the contract without issuance of a new tender.

NM – Not mentioned in RFP

#### 7. DISTINGUISHING FEATURES

##### 1

The contract monitoring framework has classified defaults / infractions into six categories. Each class of infraction has a penalty level and time to resolve that infraction. Such detailed classification of indicators based on the impact is found to help operators identify the infractions with greater penalties and avoid them.

##### 2

The 'Common Mobility Card' is introduced in Delhi to help passenger use single card for making payments in different modes i.e. metro as well as buses. While contactless smart cards are issued to commuters for payment of fare, there is also a provision for non-smart card holders to make cash payments. Adoption of digital ticketing modes helps to reduce revenue leakages.

##### 3

In order to ensure woman safety on board, CCTV cameras and Panic button have been made as standard fitments.

##### 4

The cluster contract of Delhi, permits operator to operate buses on any routes awarded to operate inside the cluster. This ensures the efficiency of the cluster bus performance with respect to key aspects such as fuel efficiency, breakdown rates and operating ratio etc.

32 | OCTOBER 2021

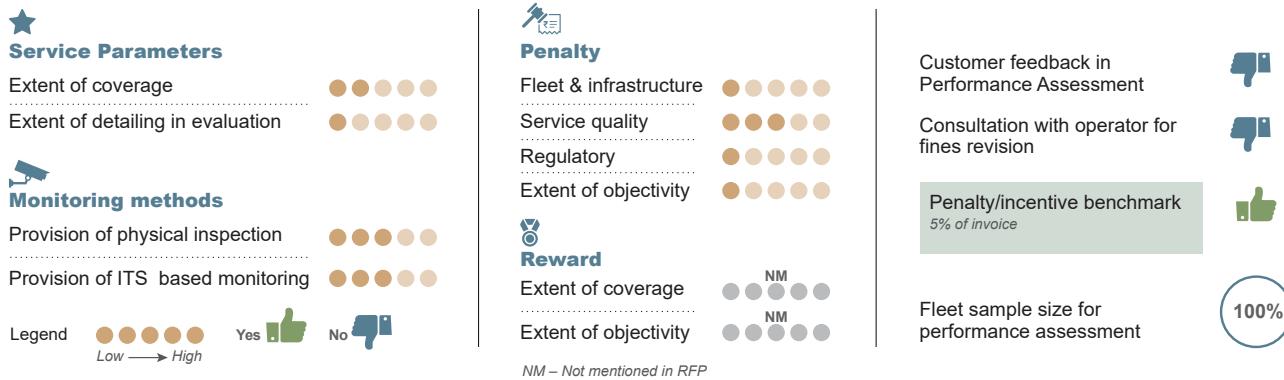

#### 4. ROLES AND RESPONSIBILITIES

As per the contracting terms various roles and responsibilities distribution between authority and operator are captured below.

#### 5. PERFORMANCE CONTROL AND MONITORING

The Operator is expected to meet base minimum performance standards for identified parameters.

#### 6. OTHER CONTRACTING TERMS

##### A CONDITIONS PRECEDENT

	Authority	Lessor
Extent of coverage of responsibilities	Medium	Medium
Penalties on non-fulfilment	Medium	Medium

##### B TERMINATION

	Authority	Lessor
Coverage of event of defaults	Medium	Medium
Degree of fair payment settlement	Medium	Medium

#### 7. DISTINGUISHING FEATURES

##### 1

Goa has followed a unique model for e-bus operations under which buses are not purchased but are leased by the Authority (lessee) from lessor for a defined contract period on per bus per day rate. The risk of procurement, design, construction, and maintenance of depots, and maintenance of rolling stock, has been allocated to the lessor.

##### 2

Lease model reduces the significant CAPEX cost for the authority because the responsibility and capital investment risk is transferred to the lessor. At the end of contract all the assets are transferred to authority.

##### 3

The contract has provision which allows the authority to operate the leased buses for any contract other than schedules defined.

Coverage of event of defaults	NM NM	Medium Medium
Degree of fair payment settlement	NM NM	Medium Medium

NM – Not mentioned in RFP

#### 7. DISTINGUISHING FEATURES

##### 1

Indore has effectively worked out a hybrid NCC model by outsourcing a cluster of high performing inter-city routes and low performing city routes. There is a provision for changing routes given to operator (partially or fully) after award of contract, based on mutual consent.

##### 2

AICTSL has effectively used reward and penalty system in the contract, by collecting penalties from poor performing operators and transferring it to high performing operators and crew (driver and conductor).

##### 3

The tender has provision for selling the bus fleet at the end of contract period and share the sale proceeds in a ratio of 60: 40 between Authority and Operator.

Legend Yes No

#### 4. ROLES AND RESPONSIBILITIES

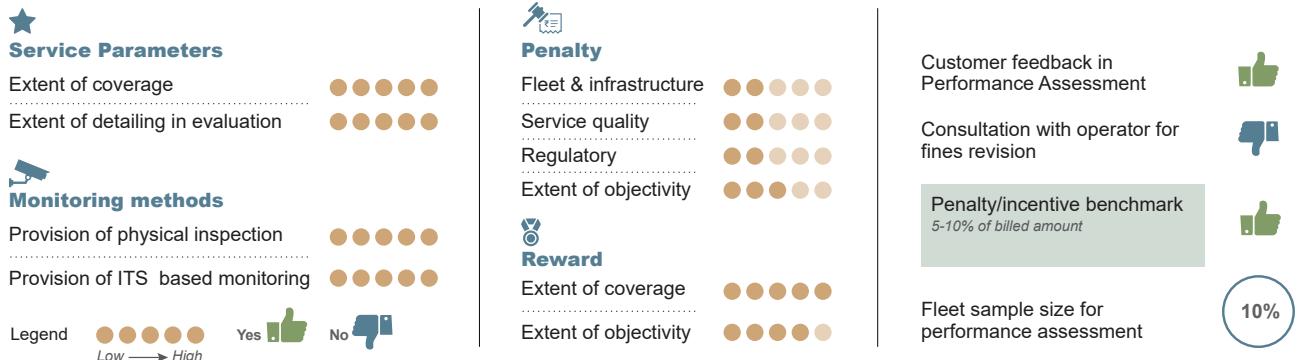

As per the contracting terms various roles and responsibilities distribution between authority and operator are captured below.

 Planning & Implementation	Authority	Operator	 Procurement & Civil Infrastructure	Authority	Operator	 Operations & Maintenance	Authority	Operator	 Monitoring & Management	Authority	Operator
Route Planning			Procurement of buses			Bus Operations			Monitoring Bus Operations		
Operational Planning			Depot Space and Infrastructure			Bus & Crew Scheduling			Fare Verification		
Fare Fixation			Installation of Charging Infrastructure			Maintenance of buses			Crew Recruitment & payment		
Marketing & Branding			Control Center			Maintenance of Charging infrastructure			Crew Training		
Obtaining Operations Permits			ITS hardware			Fare Collection			Training of Authority staff (O&M)		
Clearances & Permits for installing charging Infrastructure			ITS software								

\*Provision Depot space with minimal infrastructure.  
NA – Not applicable

#### 5. PERFORMANCE CONTROL AND MONITORING

The Operator is expected to meet base minimum performance standards for identified parameters.

#### 6. OTHER CONTRACTING TERMS

##### A CONDITIONS PRECEDENT

	Authority	Operator
Extent of coverage of responsibilities		
Penalties on non-fulfilment		

##### B TERMINATION

	Authority	Operator
Coverage of event of defaults		
Degree of fair payment settlement		

#### 7. DISTINGUISHING FEATURES

##### 1

NMC has been experimenting with running various types of special services (e.g. special services for hospital, special buses for women) which has helped them attracting additional passengers and building a brand image.

##### 2

KPIs are very clearly defined so there is limited scope for individual bias. There are incentives and penalties linked with performance indicators, and the fulfilment of performance parameters yields rewards to the operator and penalty is levied for non-fulfillment. Further, there is equitable allocation of roles and responsibilities, and payment settlement mechanism between the authority and operator.

##### 3

The tender document has provision for sharing additional revenue with operator on exceeding the desired services standards. 10% of the additional revenue generated from additional fleet availability (i.e. higher than 95% desired standard) is shared with the operator.

#### 4. ROLES AND RESPONSIBILITIES

As per the contracting terms various roles and responsibilities distribution between authority and operator are captured below.

#### 5. PERFORMANCE CONTROL AND MONITORING

The Operator is expected to meet base minimum performance standards for identified parameters.

#### 6. OTHER CONTRACTING TERMS

##### A CONDITIONS PRECEDENT

	Authority	Operator
Extent of coverage of responsibilities	Medium	Medium
Penalties on non-fulfilment	Medium	Medium

##### B TERMINATION

	Authority	Operator
Coverage of event of defaults	Medium	Medium
Degree of fair payment settlement	Medium	Medium

#### 7. DISTINGUISHING FEATURES

##### 1

NMMT is generating additional revenue by commercialization of spaces at depots and terminals by leasing the space for ATMs at terminals and CNG stations at depots. Authority is also transferring entire advertisement revenue to operator to safeguard operator from operational risk.

##### 2

Owing to lack of knowledge related to e-buses, NMMT has tried to leverage the technical expertise of private sector by transferring the responsibility for training and capacity development of authority's staff with respect to charging infrastructure and e-bus operations to the operator.

##### 3

NMMT is using ITMS to effectively monitor bus operations (24 X 7), which has reduced manpower requirement.

##### 4

NMMT gives fair chance and cure period to operator to rectify any damages and deficiencies in maintenance and repair before imposing penalty.

#### 7. DISTINGUISHING FEATURES

##### 1

Sitilink being the agency managing both BRTS and bus services enabled better coordination and integration of routes and fare structures of both the modes.

##### 2

An Urban Transport Fund has been constituted which receives funds from land value capture, parking charges, etc. which has enabled them provide the BRTS services at affordable price.

##### 3

The Authority shares risks and liabilities with operator by compensating for damages to bus wherever possible like damage to interior or exterior of bus due to advertisements. The authority has robust ITMS, and they follow transparent practice of bus monitoring with the operators which is vital for success of GCC model.

##### 4

There is a provision in tender which offers flexibility for adding new buses upto 25% of the total fleet size required under the contract without issuance of a new tender.

# 4 ANNEXURES

## ANNEXURE I: KEY INITIATIVE BY GOVT. OF INDIA (GOI) TO PROMOTE BUS TRANSPORT

### 1. URBAN TRANSPORT FUNDING OF BUSES UNDER NURM (2008-09)

- Objective:** In 2009, GoI provided cities and states financial support for bus augmentation to plan and manage organized public transport in urban areas. The scheme was also accompanied by additional reforms of urban bus specifications and detail project report for financial assistance of buses to ensure the public transport service quality.

- Coverage:** Financing pattern for bus procurement

City Population	Central Assistance	State Assistance	ULBs/ Loans from FI
More than 4 million	35 per cent	15 per cent	50 per cent
1-4 million	50 per cent	20 per cent	30 per cent
Less than 1 million	80 per cent	10 per cent	10 per cent

- Link:** <https://mohua.gov.in/cms/JNNURM.php>

### 2. SETTING UP OF UMTA & UTF (2016)

- Objective:** UMTA envisioned to establish an agency to undertake unified planning of urban transport with the objective of providing sustainable and seamless mobility to people., UTF is set up to finance the transport initiatives.
- Coverage:** The UMTA acts as an umbrella body that regulates overall performance of the transport system and ensures establishment of comprehensive transport system. The various provisions of bus services are managed by separate agencies in city and UMTA focus on providing integrated services through multimodal integration. To support establishment and management of dedicated Urban Transport Funds for urban transport projects, it also captures innovative funding sources that can be tapped to make agencies self sustainable.
- Link:** <https://mohua.gov.in/cms/UrbanAuthority.php>

### 3. FAME SCHEME (2015)

- Objective:** With an aim to support the electrification of passenger kilometers, India announced the FAME Scheme starting 2015, with a significant focus on public transport. FAME-I gave the incentives on outright purchase of the e-buses and FAME II provided incentives to city authorities on e-bus procurement under OPEX model.
- Coverage:** DHI received sanctioned 5,595 e-buses to 64 cities in 2019. The scheme provided financial support to the cities in boosting the adoption of e-buses in the existing fleet. It aided the transition process which was restrained by the high capital expenditure involved in case of e-buses. City authorities have been able to leverage private sector expertise by sharing responsibilities with them. The deployment of buses under the scheme helped operators and city agencies to better understand the challenges involved in the new technology and accordingly share the risk based on their investment appetite.
- Link:** <https://dhi.nic.in/UserView/index?mid=2418>

#### 4. GUIDELINES AND MODAL CONTRACT FOR CITY BUS PRIVATE OPERATIONS (2016)

- **Objective:** A guidelines document aimed to developed strategies to choose the appropriate business model and contract type for city bus private operations, to increase participation of private sector in O&M of bus services based on transparent contracts with clearly defined service standards, payment terms and sharing of risk.
- **Coverage:** The document covers the key features and contractual terms (Payment terms and fee revision, Damages and penalties estimation mechanism, Option for transfer of buses at the end of tenure, Monitoring of the Operator performance using ITS, Provision of Escrow account to ensure timely payment etc.) to engage private sector in bus operations to improve service performance and wider public objectives. The model contract agreements developed by the Ministry for City Bus Private Operation covers Net cost, Net cost hybrid, Gross cost and Gross cost hybrid.
- **Link:** <https://mohua.gov.in/cms/guidelines-citybus.php>

#### 5. STANDARD OPERATING PROCEDURES (SOPs) FOR SPVS OPERATING CITY BUSES PREPARED FOR CRUT, BHUBANESWAR, UNDER SMART-SUT PROJECT (2019)

- **Objective:** A guidebook document for CRUT, Bhubaneswar, under SMART-SUT initiative aimed at developing standard operating procedures for comprehensive functions performed at bus transport agencies.
- **Coverage:** The document cover the key features and functions in bus ecosystem and briefs on the daily tasks a public transport organization in overseeing the planning and provision of bus services to ensure efficient operations. The tools and guidelines for city bus operations is developed in three parts as below:
  - Part 1: Organizational Structure and Processes
  - Part 2: Planning, Scheduling and Monitoring
  - Part 3: Training and Capacity Building
- **Link:** <https://www.transformative-mobility.org/assets/publications/CRUT-Tools-and-Guidelines-for-city-bus-operations-part-1.pdf>
- <https://www.transformative-mobility.org/assets/publications/CRUT-Tools-and-Guidelines-for-city-bus-operations-part-2.pdf>
- <https://www.transformative-mobility.org/assets/publications/CRUT-Tools-and-Guidelines-for-city-bus-operations-part-3.pdf>

#### 6. REVIEW OF REGULATORY, INSTITUTIONAL & FISCAL POLICIES (2019)

- **Objective:** MoHUA, under this project, desires preparation of options and recommendations on regulatory, institutional and fiscal constraints in providing Efficient and Sustainable City Bus Services. It will aim to promote bus based public transportation in the country.
- **Coverage:** The focus is to review the urban bus sector in India and provide an outline of the country wide industry and operator structure; legislative and regulatory framework governing the urban bus sector; existing institutional arrangements supporting the industry; prevailing fiscal arrangements for the sector; and undertakes identification of the gaps and constraints in these areas.
- **Link:** [https://mohua.gov.in/upload/uploadfiles/files/PC1\\_ESCBS\\_Domestic\\_Review\\_Report\\_\(09\\_Jun\\_19\).pdf](https://mohua.gov.in/upload/uploadfiles/files/PC1_ESCBS_Domestic_Review_Report_(09_Jun_19).pdf)

## 7. DESIGN AND DEVELOPMENT OF TRAINING PROGRAMME FOR CITY TRANSPORT PROFESSIONALS (2020)

- **Objective:** One of the key activities essential for improving the public bus transport system in Indian cities is capacity building of the professionals involved in the system. MoHUA through “Design and development of training programme for City Transport Professionals” intended to address the capacity needs of cities.
- **Coverage:** This includes development of a comprehensive capacity building programme for the nascent urban bus sector including training programs, knowledge and exchange events for sharing of best practices and experience among public and private stakeholders. It also envisaged creating awareness and sensitization among city transport professionals about the need to establish public bus transport as a preferred mode of public transport.
- **Link:** <https://mohua.gov.in/cms/pc2.php>

## 8. MANUAL FOR PLANNING, DESIGN AND IMPLEMENTATION OF CITY BUS DEPOTS (2020)

- **Objective:** MoHUA has developed manual to support SPVs and other bus fleet operators to plan, design and create depot infrastructure. The in existing scenario, there is lack of appropriate infrastructure in the shape of depots which are essential for efficiently coordinated deployment of well-maintained and reliable rolling stock.
- **Coverage:** The document covers overall ecosystem of bus depots mentioned below:
  - Planning process, Site selection and Workflow in a bus depot
  - Design considerations for bus movement areas, Staff movement areas and inventory and material movement area.
  - Safety and security, utilities and environment.
- **Link:** [http://mohua.gov.in/upload/uploadfiles/files/PC4\\_Manual%20for%20Planning%2C%20Design%20and%20Implementation%20of%20City%20Bus%20Depots\\_compressed.pdf](http://mohua.gov.in/upload/uploadfiles/files/PC4_Manual%20for%20Planning%2C%20Design%20and%20Implementation%20of%20City%20Bus%20Depots_compressed.pdf)

## 9. MANUAL FOR PLANNING, DESIGNING, IMPLEMENTING AND EVALUATING ITS AND MIS PROJECTS (2020)

- **Objective:** The objective of the Manual is to provide a basic understanding of all aspects of ITS and MIS for Urban Bus Service related to improving both the internal efficiency of PT Agencies and the commuter services.
- **Coverage:** The support to public transport agencies for better understanding of
  - The basic characteristics of ITS and MIS
  - Evaluation and need assessment of public transport planning, management and operations functions for implementation of ITS and MIS
  - ITS and MIS systems requirements like data, information processing, Networks, communications, system architecture and reporting requirements
  - Analysis of possible business models for implementation of ITS/MIS Project. Estimation of overall cost including implementation and O&M costs.

Implemented by  
**giz** Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ) GmbH

As part of the Indo-German bilateral cooperation, both countries have agreed upon a strategic partnership – Green Urban Mobility Partnership (GUMP) between Ministry of Housing and Urban Affairs (MoHUA) and Federal Ministry for Economic Cooperation and Development (BMZ). Within the framework of the partnership of technical and financial cooperation, the German government will support improvements of green urban mobility infrastructure and services, strengthen capacities of national, state, and local institutions to design and implement sustainable, inclusive, and smart mobility solutions in Indian cities. As part of the GUMP partnership, Germany will also be supporting in expanding the public transport infrastructure, multimodal integration, using low-emission or zero-emission technologies, and promoting non-motorised transport in India. Through this strategic partnership, India and Germany intend to jointly achieve effective international contributions to fight climate change.
